even in the third decade of the twenty first century it is still harder for women to make a career in science than men two centuries ago however at the beginning of the nineteenth century when science as we know it was just getting started the situation was far worse then the very notion of a female scientist would have been regarded as something of an oxymoron from bestselling and award winning science writers john and mary gribbin against the odds highlights the achievements of women who overcame hurdles and achieved scientific success although not always as much as they deserved in spite of male prejudice as society changed over about 150 years from the middle of the nineteenth century to the end of the twentieth century there is eunice newton foote who discovered the carbon dioxide greenhouse effect chien shiung wu who discovered the law which allows matter to exist in the universe today and barbara mcclintock who discovered how genes turn on and off with a foreword from astrophysicist jocelyn bell burnell this book is not only a cautionary tale about the stifling effects of prejudice against women in science but is a celebration of those who achieved success against the odds and an inspiration for the next generation

adoption allows families to modify either overtly or covertly what is considered to be the natural order cures for chance explores how early modern english theatre questioned the inevitability of the biological family and proposed new models of familial structure financial inheritance and gendered familial authority because the practice of adoption circumvents sexual reproduction its portrayal obliges audiences to reconsider

ideas of nature and kinship this study elucidates the ways in which adoptive familial relations were defined described and envisioned on stage particularly in the works of shakespeare and middleton in the plays in question families and individual characters create alter and manage familial relations throughout cures for chance adoption is considered in the broader socioeconomic and political climate of the period literary works and a wide range of other early modern texts including treatises on horticulture and natural history and household and conduct manuals are analysed in their historical and cultural contexts erin ellerbeck argues that dramatic representations of adoption test conventional notions of family by rendering the family unit a social construction rather than a biological certainty and that in doing so they evoke the alteration of nature by human hands that was already pervasive at the time
